Options for Brown Bins Environment Committee, November 18, 2008, Item 11

Committee:ENVIRONMENT COMMITTEEAgenda ItemDate:November 18, 200811Title:OPTIONS FOR BROWN BINSAuthor:Diane Burridge, Director of Operations,<br/>01799 510580Item for decision

#### Summary

1. The 140 litre, wheeled, kitchen waste bins have received some criticism in the community, a trial of a smaller, square bucket type bin is proposed to evaluate if this is a more suitable receptacle for kitchen waste collection from domestic properties.

#### Recommendations

2. That a trial 25 litre caddies on one kitchen waste collection round (approximately 1000 properties covering both rural and urban areas) is undertaken commencing January 12 2009 and continuing to June 2009 to permit assessment to be reported to Members for decision at Council in May 2009 subject to support funding from Essex County Council.

#### **Background Papers**

3. The following papers were referred to by the author in the preparation of this report and are available for inspection from the author of the report.

Sustainable Waste Strategy for Uttlesford

#### Impact

| Communication/Consultation | Those in the trial area will receive<br>notification of the trial and a pre-trial<br>questionnaire. A further survey will be<br>undertaken during the trial period and<br>results reported to members. |
|----------------------------|--|
| Community Safety           | The survey will capture any adverse effect.  |
| Equalities                 | Those entitled to assisted collection will retain their entitlement.   |
| Finance                    | Estimated cost of trial £11,200 to be funded by EEC.   |
| Human Rights               | None   |

| Legal implications    | None   |
|-----------------------|--|
| Sustainability        | High diversion from landfill aids sustainability   |
| Ward-specific impacts | Trial area proposed. Debden, Debden<br>Green, Henham, Widdington, part of<br>Dunmow (High Styles, Chequers Lane) |
| Workforce/Workplace   | Crew involved in trial to be briefed as to its purpose and trained in safe collection methods                    |

#### Situation/Update

- 5. Uttlesford's Waste Strategy was agreed by Council in December 2005. Its Key Aims were to:
  - 1. Improve recycling performance;
  - 2. Minimise waste;
  - 3. Maximise recycling credits
  - 4. Minimise landfill tax and penalties
- 6. To make a step change in our performance a step change was needed in our collection system. The three bin system was introduced with investment in bins and vehicles.
- 7. This change also required other issues to be addressed:
  - The refuse collection contract needed to be brought back in-house (TUPE transfer) and blended with the DSO which had responsibility for recycling collection.
  - Establishment of disposal partners for the materials collected
  - Reconfiguration of the rounds
  - Assessment of all domestic properties for the suitability to store/manage wheeled bins.
  - Hotline to support residents with the new scheme
  - Communications strategy
  - Large scale project management
  - Procurement of vehicles and bins
- 8. The new 3 bin system required residents to separate and present their household waste in a way they had not experienced before namely:
  - 140 litre wheeled bin for kitchen waste
  - 180 litre wheeled bin for non- recyclable waste
  - 240 litre wheeled bin for clean and dry recyclables

-

All of which would be presented at the boundary of the property in accordance with the collection schedule provided.

- 9. This work commenced upon decision of the Council and rolled out between June and November 2006 and achieved what it set out to do. Uttlesford has bettered its landfill allowance by 2,800 tonnes in 2006/7 and 4,700 tonnes in 2007/. Our recycling credits have increased as has our % recycling. Our waste to landfill and total waste arrisings have decreased. All of which is evidenced in the graph at **appendix I** along with comparison data from other Essex Authorities **appendix II**.
- 10. The three bin scheme was not universally popular at commencement but settled as residents became understanding. However, comments continue to be made about the size of the kitchen waste bin which has capacity beyond the needs of residents.
- 11. This now brings us to the point in time when we need to consider if there are any affordable options to adjust the scheme.

## 12. Three options have been explored:

- 1. Collection of green waste using kitchen waste bin
- 2. A pre-paid green waste collection service
- 3. Providing smaller bins for kitchen waste
- 13. These options are set out in turn in the following pages.

## Option 1 - Collection of green waste

- This first option explores the potential for green waste to be added to the kitchen waste utilising the residual capacity in the 140 litre wheeled bin.
- We have collected benchmark figures from a comparable authority and found, pro rata, that we should expect participation in the region of tonnage of 10,000 tonnes p.a.
- The pay load of a kitchen waste vehicle is 6 tonnes and the additional tonnage would require an estimated additional two rounds with respective vehicles and crews.
- The revenue costs associated with each waste vehicle, its crew and maintenance are in the region of £110,000.
- The loss of recycling credit will be £80,000 when the credit for food waste (£47/t) moves to mixed green and food waste (£20/t)

#### Implications of Option 1

The additional cost of collecting green waste with kitchen waste is estimated at  $\pm 300,000$ 

Added to this the following must be considered:

- Collection of green waste is not supported by the County Council and any partnership funding we would hope to achieve may be compromised.
- The collection of green waste is not a palatable solution environmentally.

There are already a number of ways available to residents to deal with green waste in Uttlesford:

- 1 Home composting
- 2 Village green waste weekend service
- 3 Weekend recycling skips in Stansted, Thaxted and Dunmow
- 4 Civic Amenity site in Saffron Walden (and later to be added at Dunmow)
- 5 Prepaid bag service that residents set out with their Kitchen waste.

Officers also have further concerns that the addition of green waste may drive kitchen waste back into the non-recyclable waste stream, this being the target material that this whole scheme was established to divert from landfill. The additional cost of this option would be borne by Uttlesford and officers are unable to recommend this option at this time.

#### **Option 2 - A pre-paid green waste collection service**

Should the council wish to provide a chargeable service this would need to be a separate collection from kitchen waste to comply with legal advice in that under the Regulations for Controlled Waste, no charge may be made for collection of food waste.

Development of a business case to collect separated green waste would require a detailed report and would need to build a business base over a number of years and cover its own costs.

Again officers are unable to recommend developing this option at this time.

#### **Option 3 - Providing smaller bins for kitchen waste**

Residents have expressed a preference for smaller bins for their kitchen waste, whilst there is no measure of how well this might be supported and how well it might go down in practice there is the opportunity to run a trial and collect the evidence to allow Members to make a decision about smaller bins suitability for the district.

The cost implications are:

|   | Trial of 1000 properties | Whole district  |
|---|--------------------------|---|
| 25 litre caddies  | £4,300                   | £124,000  |
| Delivery staffing   | £600                     | £26,000   |
| Communications  | £1,300                   | £4,000  |
| Customer care line,<br>production of two<br>questionnaires and<br>analysis. | £5,000                   | Would review costs on<br>completion of the trial but<br>should assume customer<br>care line costs of c£15,000 |

A post rollout survey (1,200 responses) was completed in April 2007 for the new scheme and 9% of the participants posted comments about the large size of the kitchen waste bins.

Members of the Waste Project Team have twice met to discuss the proposal of a trial and are keen that this option is tested. They have viewed both a 20 litre and a 25 litre bin and have given a preference for 25 litres because of its capacity and ease of lifting for residents. A sample bin will be available for members to view at the meeting

Should the trial be successful a smaller bin will give us the opportunity to review those properties previously identified as exempt due to lack of storage space for 140 litre bin.

The trial will also give us the opportunity to assess if the collection is quicker by utilsing a slave wheeled bin to decant the contents of several 25 litre bins into before emptying via the existing bin lifts attached to the vehicle. The trial has selected a mix of urban and rural areas where slave bin can and sometimes can't be used to good effect.

Option 3 offers the opportunity for an early trial with support funding from ECC. Members are asked to confirm a trial to ascertain the likely success of smaller bins for kitchen waste.

#### **Risk Analysis for introduction of 25 litre caddies**

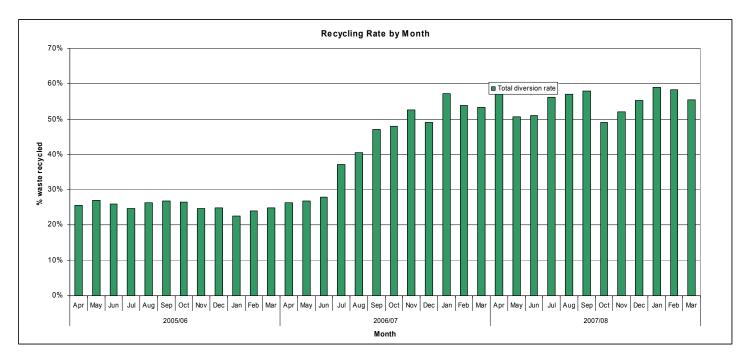

| Risk  | Likelihood   | Impact   | Mitigating actions                 |
|---|--|--|------------------------------------|
| Manual handling<br>reintroduced for<br>collection crews<br>may result in<br>health issues | 2<br>Due to<br>repetitive<br>movement<br>and lifting | 2<br>Increased<br>sickness and<br>redeployment | Manual Handling<br>risk assessment |

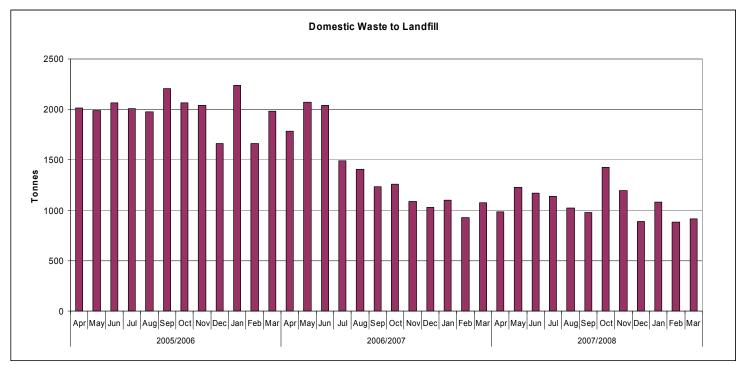

| Manual handling<br>reintroduced for<br>residents   | 2<br>Lifting of<br>buckets vs<br>wheeling of<br>bins  | 2<br>Increase in<br>assisted<br>collections               | Need to accept that<br>lifting may be more<br>difficult for some<br>people   |
|--|---|---|--|
| Bins may be<br>opened by<br>children or<br>animals | 1   | 2   | Bins with locking lids procured.   |
| Residents may<br>not co-operate<br>with trial      | 1   | 2   | Communications<br>explain clearly<br>details of the trial.   |
| Some residents<br>may find the bins<br>too small   | 1<br>Limited to<br>those with<br>detailed<br>understanding<br>of our<br>schemes and<br>recycle cut<br>flowers<br>paper/and<br>contaminated<br>by food in<br>brown | 2<br>Potential for<br>waste to<br>landfill to<br>increase | The trial will identify<br>if this is found to be<br>a problem in practice<br>by asking<br>participants in the<br>survey.<br>Black bin contents to<br>be assessed. |

1 = Little or no risk or impact

2 = Some risk or impact – action may be necessary,
3 = Significant risk or impact – action required
4 = Near certainty of risk occurring, catastrophic effect or failure of project.

# Appendix I

# Uttlesford Recycling Credits

| Year         | Kitchen Credits | Total Recycling Credits |
|--------------|-----------------|-------------------------|
| 2005/6       | £0              | £349,580                |
| 2006/7       | £88,712         | £560,707                |
| 2007/8       | £173,185        | £743,084                |
| 2008/9(Est.) | £210,000 gge 7  | £791,000                |

## Appendix II

For the year 2006/7 DEFRA recognised Uttlesford as being: -

- **1st** most improved recycling rate (25% to 42.8%)
- **2nd** most improved reduction in waste to landfill (-31%)
- **3rd** largest decrease in total household waste generated (-10.92 per head)
- **10th** best dry recycling rate (30.1%)
- **34th** best collection authority (42.8%)

During 2007/08 we remained as the number one collection authority in Essex and will soon be announced as one of the top recycling authorities in the country (54% recycling and composting rate). Our dry recycling rate for the year will be announced as 34.7%, which we believe will be near to, if not, the **top** of the league table. More importantly, and in line with not only the Essex Waste Strategy, but also the National Waste Strategy, we are the only authority in Essex to reduce our total household waste arisings each year between 2000/01 and 2006/07.

|               | 2000/01 | 2001/02   | 2002/03 | 2003/04 | 2004/5  | 2005/6  | 2006/7  | %<br>change<br>2000/01<br>to<br>2006/07 |
