

**Member Motion as submitted by Councillor Barker - Full Council, 18 July:
HGVs and Satnavs**

Motion:

“This Council believes that HGVs using standard car Sat Navs collide with local infrastructure, such as railway bridges, or become stuck on narrow roads, causing major disruption and is costly to local communities. They often take significant amounts of time and resources to free, causing major congestion across the Essex road network generating more emissions and disrupting local rail services.

This Council therefore instructs the Chief Executive to write to the Government and call on them to work with Satellite Navigation companies and others providing road information to remove By Ways, By Roads and other similar roads from their systems.”

Proposer: Councillor Barker
